

How we got each dataset

nhs_rtt_trust_monthly.csv

- 130 monthly Excel files from NHS England RTT page. Bulk downloaded with the **DownThemAll** Chrome extension
- Combined into one Tableau-ready CSV. 22,646 rows. Apr 2015 to Jan 2026
- Older Excel files had 11 rows of title text before the actual data. Needed dynamic header detection
- Power Query opens each file. Finds the header. Keeps only the all-specialty total rows. Combines all 130 files

national_workforce_monthly.csv

- 1 xlsx from NHS Digital workforce statistics page. Direct download
- Table 1 contains the full history back to 2009. 198 rows. Sep 2009 to Feb 2026
- 4 title rows before the header. Date columns turn into text when promoted. Needed re-parsing
- Power Query skips title rows. Picks the staff groups we want. Reshapes the table for Tableau

trust_locations.csv

- Same xlsx as the workforce file. Uses Table 2. No separate download for the base data
- Lookup of trust to region and ICB. 247 rows
- The "NHS England region name" header had a hidden line break. Needed whitespace cleanup
- Power Query skips title rows. Cleans column names. Drops summary rows. Keeps one row per organisation
- Added latitude and longitude by sourcing trust postcodes from the NHS ODS Trust Master file then geocoding via the postcodes.io bulk lookup tool. Joined back to trust_locations on provider_code
